If you have been skeptical about American demographic changes and the resulting decline in college enrollment, review the latest United States Census Bureau statistics. Released Sept. 24, 2014, the report shows a historic drop in college enrollments:

- A one-year decline of more than 460,000 students
- A two-year decline in enrollment of 930,000 students, called "larger than any college enrollment drop before the recent recession"

These decreases follow a period of significant growth between 2006 and 2011 when the number of enrolled students climbed by more than 3.2 million. Many have theorized that the slow economy drove students back to the classroom in an environment where jobs were scarce.

While the headlines are arresting, it's worth spending time reviewing the details:

- **Two-year institutions are affected most:** Enrollment dropped 10 percent at two-year colleges, while it rose modestly (1 percent) at four-year institutions.
- **Latino enrollment has stagnated:** Enrollment by students from Latino backgrounds was flat last year, after an increase of 1 million students over the previous five years (2007 to 2012).
- **Declines cut across age levels:** The change in enrollment for students 21 and younger fell at about the same rate as for students 25 and older.
These shifts should not come as a surprise. In their 2013 edition of *Knocking at the College Door*, the Western Interstate Commission for Higher Education reiterated their long-standing prediction that a decrease in high school graduates will result in stiffer competition for recent high school graduates.

**How to Cope with Changing Demographics**

While the trends are sobering, there are glimmers of positive news. The past year saw a continued increase in the percentage of students from recent graduating classes going on to college. This increase in college-going rates will not, on its own, offset declining enrollments, but it does point the way to strategies you can employ on your campus:

- **Learn from other institutions**: The University of California system recently announced that it has admitted more Latino students (29 percent of the admitted class) than whites (27 percent) for the 2014 academic year.

- **Review your student search strategy**: Leverage the solutions available in *College Board Search* to make sure your search orders are targeted and strategic. *Enrollment Planning Service™* can help you better understand today’s shifting market.

- **Build strategies for increasing student diversity**: Information from the *Access and Diversity Collaborative* can help you build access and next-generation diversity goals in ethical, legally sound ways.

- **Communicate your strengths**: Place your *net price calculator* prominently on your website, and consider a variety of other tools to help prospective students understand everything your institution has to offer.

**News and Events**

**In-Person College Board Search Training Available This Fall**

The College Board's experts in admission and enrollment
management will offer workshops on how to use College Board Search for strategic enrollment planning. Register today.

Higher Education Colloquium 2015
Jan. 10–12, 2015, Delray Beach, Fla.

Gather with other leaders for serious thinking and spirited dialogue concerning critical issues facing our field. You will return to the office with key insights that will inform your work and decisions for the coming year and beyond. Register today.

College Board Regional Forums
January–February 2015

Join other education professionals to share insights and best practices on improving college completion rates, using assessments to increase college and career readiness, delivering rigorous and advanced course work effectively, and increasing access to opportunity for diverse student populations. Register today.

Sincerely,

Sheryl Sobiesiak
Senior Director, Higher Education Services
Middle States Regional Office
